Yamaha Sidewinder	X						X										
Yamaha Outboard **	X						X							X	X	X	

* Activation+ is a multi-purpose app for test and calibration of vehicle components. The first tab is for fuel components and will send a signal to the injectors or fuel pump to test them. If they are responding correctly, they will create a humming sound just as in this example. The next tab does the same for the coils. All can be tested individually. The third and final tab in Activation+ is for watercrafts with IBR. You can adjust the IBR manually and also perform a calibration.

** Some outboard engines share support with Yamaha PWC.
